25X1

1. The IFA plant in Leipzig produces tank cars with a capacity of 5,000 **liters**. * Each car has five hose couplings. The plant is operated at capacity to fulfill its quotas. There are frequent inspections by commissions of high-ranking officers of the Soviet Army, Air Force and Navy.
2. The Schaeffer and Budenberg plant in Magdeburg manufactures gasoline pumps for tank cars and oil pressure gauges for tanks and airplanes.** The gasoline pumps can pump 5,000 liters in 10 minutes.

25X1 * Comment. The IFA plant is probably the former Auto Union plant in Leipzig, which after its expropriation had been assigned to the VVB IFA.

25X1 ** Comment. The Schaeffer and Budenberg plant was assigned to the Pribor SAG until early in 1950. After the Pribor SAG had been dissolved the plant was assigned to the Transmash SAG. The plant works mainly for the Soviet Army and produces miscellaneous fittings.
